

AMENDMENT TO THE SPECIFICATION

Please replace the paragraph starting on page 7, line 5 and ending on page 7, line 21 with the following paragraph:

The tray 18 is driven between an extended or loading position shown in Figure 1 to a processing position, wherein it is retracted, and moves inwardly past the laminating roller 24 or other processing station. The tray 18 is driven with a motor 19 driving a longitudinal screw drive 19A with a traveling nut 19B connected to the tray in a known manner, and thus shown only schematically. The tray is reversed in direction applying the laminate film. The laminating roller 24 is driven from a motor 26 through a suitable belt coupling. The laminating roller 24 is a heated roller that laminates a film from a web 28 onto the disc or other substrate in a normal manner. The web 28 is removed from a supply roller 30, and is threaded under [[____]] the laminator roller over to a take up roll 32, on suitable guides that can be arranged in any desired configuration.
